This year there is  
a big step  
forward in  
data collection,  
student and  
course level data.

## Tools to use in data collection:

For schools with a robust student information system a REST JSON API can be used.

For users needing a manual process, a user interface - which we're about to show - is provided.

REST (REpresentational State Transfer)  
JSON (JavaScript Object Notation)  
API (Application Program Interface)

It is a capital mistake to

You can have data without information,

To write it, it took three months;
